

## Protecta FR Putty Cord - Plasterboard Wall Cable Bundle

### Installation Instructions

1. Before installing Protecta® FR Putty Cord ensure that the surface of all service penetrations and surrounding construction is wiped clean, dry, free from all loose contaminants, dust, oils and grease.
2. Place the Putty Cord around the services so that it seals the services to the wall all the way round.
3. Press the Putty Cord into the wall and services with your thumbs to form a fillet or V shape joint, ensuring good contact is made all the way round the services and the wall.
4. Insulated cables with copper or aluminium conductors, fibre optic cables or communication cables.
5. The putty cord is designed to be easily fitted around service penetrations where the gap around the services is very small, or there is no gap at all so a conventional fire rated sealant is impossible or difficult to fit due to the required depth and backing material. The putty cords are fitted covering the gap around the services and do not need to fill the gap to any required depth.

System/FPA Register ID# FC349

<b>Products</b>	Protecta FR Putty Cord
<b>Application</b>	Fire stopping of cables in flexible walls
<b>Construction</b>	Minimum wall thickness of 100mm and comprise steel or timber studs lined on both faces with minimum 1 layer of 13mm thick board*

### Fire & Sound Classification

Cable bundles up to 50mm diam:	
Individual cables < 21mm	FRR -/120/120
Individual cables > 21mm	FRR -/60/60
Single cables up to 21mm diam	
Single cables up to 80mm diam	FRR -/60/60

\*FRRs shown are for double layer 13mm walls. Where single layer 13mm walls have an FRR lower than the above then the FRR of the seal must be reduced to match the FRR of the wall.
