

Protecta FR Putty Cord - Concrete Wall Bare Pipe

Installation Instructions

1. Before installing Protecta® FR Putty Cord ensure that the surface of all service penetrations and surrounding construction is wiped clean, dry, free from all loose contaminants, dust, oils and grease.
2. Place the Putty Cord around the services so that it seals the services to the wall all the way round.
3. Press the Putty Cord into the wall and services with your thumbs to form a fillet or V shape joint, ensuring good contact is made all the way round the services and the wall.
4. Pipes may be Steel, Copper or Alupex (PEX-AL-PEX). Note that copper and alupex systems are AS1530 compliant only for closed systems.
5. The putty cord is designed to be easily fitted around service penetrations where the gap around the services is very small, or there is no gap at all so a conventional fire rated sealant is impossible or difficult to fit due to the required depth and backing material. The putty cords are fitted covering the gap around the services and do not need to fill the gap to any required depth.

System/FPA Register ID# FC404

Products	Protecta FR Putty Cord
Application	Fire stopping of bare pipes in rigid walls
Construction	Minimum wall thickness of 100mm and comprise concrete, aerated concrete or masonry, with a density of $\geq 650 \text{ kg/m}^3$

Fire & Sound classification

Steel up to 22mm	FRR -/120/60
Steel up to 30mm	FRR -/120/45
Steel up to 324mm	FRR -/120/-
Copper up to 6mm	FRR -/120/120*
Copper up to 12mm	FRR -/120/60*
Copper up to 54mm	FRR -/120/-*
Alupex up to 16mm	FRR -/120/120*
Alupex up to 20mm	FRR -/120/90*

* Closed systems only
