To Whom it may Concern

Single-sided Penetrations

Polyseam Ltd wishes to advise that all Protecta Passive Fire Systems which involve cables or pipes penetrating both sides of a fire wall may also be used in the situation where the cable or pipe penetrates one side of the wall only and the remaining side of the wall is not penetrated at the same point (i.e. the cable or pipe continues on the inside of the wall).

Polyseam Ltd confirms that all fire integrity and thermal insulation ratings for such single-sided penetrations remain the same as for the equivalent double-sided penetration.

Signed

Kjetil Bogstad CEO
