

Gaps between steel columns, beams or substrates

Authorised New Zealand Distributor Ph (09) 483 4000 www.firestopcentre.co.nz

<u>Installation Instructions</u>

- 1. Before installing Protecta® FR Acrylic ensure that the surface of all surrounding construction is free from all loose contaminants, dust and grease.
- 2. Where Protecta® FR Acrylic is to be installed against surfaces that cannot tolerate direct contact: appropriate surface preparation should be made (contact Polyseam for guidance in these cases). For paints sensitive to sealing compounds, priming with a PVA primer is recommended.
- 3. When installing the sealant in gypsum boards, the exposed edges of the board can be wetted with water, or Protecta® FR Acrylic diluted with water to prime the surfaces helping adhesion and preventing excessive joint shrinkage.
- 4. When installing any backing material, cut this slightly oversize and insert into the gap ensuring a tight friction fit. Ensure correct depth is achieved.
- 5. Fill the gap or joint with Protecta® FR Acrylic to the required depth.
- 6. Apply the sealant generously to prevent air bubbles. Finish the bead with a moist spatula, pallet knife or brush.
- 7. Protecta® FR Acrylic can be over-painted with most emulsion or alkyd (gloss) paints.

Products Protecta FR Acrylic

Stone wool

Fire rated linear seals in Application

flexible or rigid walls

Construction Minimum wall thickness of 100

> mm and comprise steel studs or timber studs lined on both faces with minimum 2 layers of 12.5 mm thick boards.

Fire & Sound classification

12.5mm Acrylic plus 12.5mm stone wool 35kg/ m³ one side only (or 25mm Acrylic one side only). Max gap 30mm.

FRR -/120/30

NB: Thermal Rating determined by the rating of the steel substrate.

ZERO smoke leakage up to 200Pa

Sound reduction (seal only)
